INDEPENDENT DEVELOPMENT PROJECTS

- **Personal Site:** HTML, Bootstrap, CSS3, .NET Core MVC
- **C# Dungeon Application: A** .NET Core Console Application where the foundational concepts of C#, as a language, were learned. Player battles Monsters in a dungeon, has access to an inventory system, and can move from room to room.
- **Retro Games StoreFront**: .NET Core MVC Web Application for managing product data. Application is built to simulate an online store front with a shopping cart. Administrators have the ability to manage product, category, and vendor data.
- **ToDo API**: RESTful API that can be consumed by another application. The topic of this API is to provide the backend functionality for the React ToDo list application.
- **React ToDo Web Application**: Single page application using React JS. The app allows users to sign in and see items on the to do list as well as mark to do items as complete. Admins are able to add, edit, and delete. This application leverages the .NET Web API as the backend of the app.
- **S.A.T. Scheduling Administration Tool:** .NET Core MVC Web Application for managing product data. The application is built to simulate an online class scheduling system. Administrators have the ability to manage students, courses, scheduled classes, and enrollments.
- **Atomic Synergistics Intranet:** .NET Core MVC Web Application for managing company records. The Application is built to simulate a company intranet where, once logged in, the user has access to company records such as Customer, Products, Employees, and Vendors (based on User's Role). Built as a team using Scrum & Agile Methodologies.
